To Whom It May Concern:

RE: FRANCOIS VALOUR
PPRN: 355763
MED:
DOB: 09-11

Mr. Vautour has asked me to write a letter certifying that he has been my patient. I saw him first on August 26, 2009 and felt that he had a cervical myelopathy with spinal stenosis. This, I believe, was related to a disc protrusion at the cervical levels between C5 and C6. We planned surgery for him and fortunately he has recovered spontaneously. Therefore, we do not believe the surgery is necessary as it had been. Mr. Vautour has been discharged to the care of his family doctor.

Yours truly,

W. Brian Wheelock MD, FRCSC
